

Problem Statement

Author- Hunter Earnhardt

You need to be able to get your complete medical information from one centralized and secure place.

Details

Who is experiencing this problem?

- Everyone who has a medical history or are switching local doctors. As well as anyone who has a medical emergency.

Explanation

- As doctors go to more online solutions for information they have started giving your copy of medical reports virtually. This can cause confusion when the different doctors use different apps or websites to give copies of medical reports or warnings.
- A centralized app would allow for the combination of all of one person's medical history or conditions.
- This will also help first responders to assess if a person has an outlying medical condition in the case of emergency when the person in question is not able to inform them about such information.
